

**"System and Method for Automatic Natural Language
Translation During Information Transfer"**

ABSTRACT OF THE DISCLOSURE

[0100] Information elements such as text, tables, graphics, and hyperlinks, are
5 intercepted during their transfer from a computer source to a computer destination,
such as during a cut-and-paste operation. It is determined if each intercepted
information element is expressed in a natural language which matches a
user-specified natural language intended for the destination, and if not, one or more
natural language handling actions such as translation or isolation of the information
10 elements is performed in order to match the desired destination language. Translated
information elements are delivered to the destination, and isolated elements are placed
in a data store for later review and/or exchange with other elements.
